

We have expertise from more than two decades in ITS and real-time traffic information. We offer the best in roadside detection by combining vehicle tracking systems with data collection and vehicle classification using AI and deep learning.

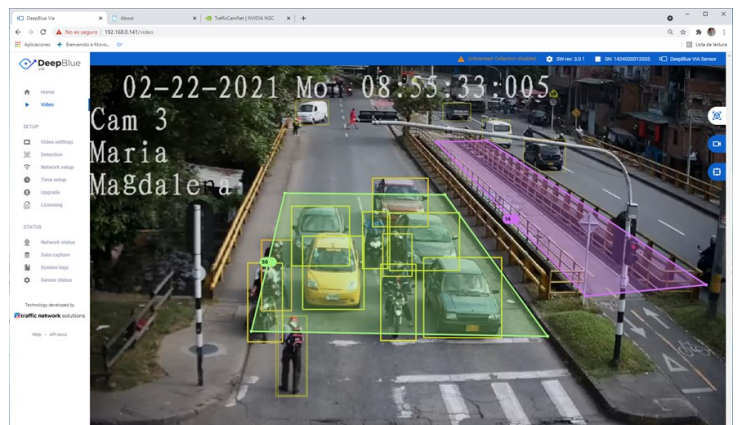

Discover a unique platform that gives you the freedom to use your hardware of choice, and create your own custom detection models.

DeepBlue VIA is a platform for go-to-market AI object detection built on NVIDIA technology. DeepBlue VIA helps driving deep learning to a new level

Featured applications:

- Smart City
- Traffic Control
- Automatic Incident detection
- Customized

## Hardware Requirements

DeepBlue VIA is fully compatible with NVIDIA Graphics Processing Units, and can be installed on any equipment that has an NVIDIA GPU

This includes:

- Jetson Nano
- Jetson Xavier NX
- Jetson Xavier Drive
- Discrete GPU
- Cloud

With our dedication to continuous development the specifications are subject to change. To verify the current information please visit [www.deepbluesensor.com](http://www.deepbluesensor.com)
